

RSQLite_grouping

April 8, 2021

```
[1]: library(RSQLite)
```

```
[2]: dbc <- dbConnect(SQLite(), "bnames.sqlite")
```

```
[3]: dbListTables(dbc)
```

'babyNames'

```
[4]: dbListFields(dbc, "babyNames")
```

1. 'Name' 2. 'Sex' 3. 'Count' 4. 'Year'

```
[6]: bob <- dbGetQuery(dbc, "select Name, sum(count) from babyNames group by Sex")
```

```
[7]: bob
```

	Name	sum(count)
	<chr>	<int>
A data.frame: 2 × 2	Mary	159516801
	John	161955468

```
[8]: #According to the code, John & Mary are the mose common names by sex (M and F)
```

```
